

Between the Lines

Volume 19, Issue 3

Winter 2018

In Memory of Randall M. Quesnel

NORTH FERRISBURGH - Randall M. Quesnel Jr. 36, died Tuesday evening July 10, 2018 at Porter Medical Center as the result of a motor vehicle accident.

He was born June 2, 1982 in Middlebury the son of Randall M. Quesnel Sr. and Jean (Hamlin) Quesnel.

Randy was a graduate of Middlebury Union High School, class of 2000 and graduated from Vermont Technical College in 2003. He was married to Becky (Pidgeon) Quesnel on November 6, 2010. In 2010 he established See Green Farm LLC, which he owned and operated in Salisbury and in Cornwall, VT.

Randy was also very active on the board of directors for the American Lineback Cattle Registry Inc. He developed aspects of the breed promotions committee and worked to make more promotional items available to members and those interested in Linebacks. Randy was working towards having one of the most elite and sought after herds of lineback cattle in the Northeast. In June, Randy made the journey from Vermont to Beaver Springs, Pennsylvania for the ALCR Eastern Region Show where his entry Moo-Vue Halfback Lucinda, a 4 year old was Best Udder, Senior & Grand Champion of the Show.

Randy had sparkly blue eyes, unmatched quick wit and an infectious smile or laugh that could always be found. He enjoyed farming, animals (particularly lineback cows), wide open spaces, petting "his cat" Dixie, the local NASCAR pool, watching his TV programs, traveling to the desert and loving his wife Becky (affectionately known as "baby") and looked forward to his daily hugs from his mom whom he loved dearly. Randy had a very special relationship with his grandparents, Paul and Annette Hamlin of Middlebury, that gave him much joy. For those of you who were lucky enough to have been given a nickname by Randy, please know that was a sign of his love.

Survivors are his wife Becky (Pidgeon) Quesnel of North Ferrisburgh, his parents Randall Sr. and Jean Quesnel of Salisbury, by his brother, Ricky Quesnel and his wife Alice of Shoreham, by his sister Virginia Gillett of Vergennes, by his in-laws Arlan and Donna Pidgeon of Leicester, by his brother-in-law Scott Pidgeon and his wife Jill. Also, by numerous aunts, uncle, nieces, nephews and cousins.

Board Action Update

- As of January 1st, 2019 every lineback to be considered for registration must have **AT LEAST ONE (1) Registered Lineback Parent**
- Approved a 2019 Show, more details to come
- **TIME TO RENEW MEMBERSHIPS FOR 2019**

Editors Corner

Fellow Lineback Breeders,

I can not believe that 2018 has come and gone in the blind of an eye and that the holidays are here! It has been a tough year in many ways, farming and working, keeping up with the shows, handling Registry business as the interim secretary and continuing with the newsletter. I am working on a few possible new ideas for the Newsletter, but am looking for suggestions too. Please feel free to reach out to me with questions or ideas about the newsletter at betweenthelines1985@gmail.com.

My apologies for the delay in getting this newsletter out, the days have just buzzed by faster than I expected, especially when I had begun putting this together in mid-October. There have been some topics that arose and needed to be addressed and discussed before printing could proceed and recently over the holidays I have been sick.

I hope this newsletter finds you in good health and spirits! If you are available in January stop by and visit us at the Pennsylvania Farm Show. Have a Happy Holiday Season!

Presidents Message

- Deidra Bollinger

Season Greetings Fellow Lineback Enthusiasts,

We are finishing off a year that will be remembered in history as a problematic and tough in all aspects of the dairy industry. From milk prices, beef prices, to horrible weather 2018 has been pretty gloomy. But instead of dwelling on what has happened, we need to look forward to 2019 with hope and strength to make a better future. We are all here for each other and love working with cattle, especially the sturdy, long lasting Lineback. At home, our Linebacks are helping us with being the top cows of our herd and I've heard that from many other breeders.

As for the association we are working to make everything smoother and quicker to benefit our breeders. Please be patient with us as we are solving some of these issues. And please contact us if you have questions. We want to help you. The breeders and enthusiasts are what makes this breed grow. We want to make your involvement a pleasant one.

So here's to making 2019 a better year!

*Happy Holidays,
Joseph Stowe
ALCR President*

BLAD in Lineback Cattle: A Deadly Emerging Threat

By Rose Nolen-Walston, DVM, DACVIM
Associate Professor of Veterinary Internal Medicine
New Bolton Center
University of Pennsylvania's School of Veterinary Medicine,

The young Lineback heifer calf presented to New Bolton Center, the large animal hospital of University of Pennsylvania's School of Veterinary Medicine (Penn Vet), gasping to breathe, her gums and tongue blue. Despite excellent care at the farm, it looked like pneumonia was going to get the best of her. No breeder likes to lose a calf from respiratory disease, but unfortunately some pneumonia losses are inevitable. The big surprise, though, came when her blood count came back from the lab: the white blood cell count was over 120,000 cells/ul, 100 times the normal amount. This was much higher than a simple pneumonia would ever cause. It was a tell-tale marker of a genetic disease that has caused significant losses to the Holstein-Friesian breed in the eighties and nineties: BLAD.

BLAD (Bovine Leukocyte Adhesion Deficiency) is a genetic disease that causes white blood cells to fail to fight infection effectively. Calves with BLAD can only result from the breeding of two carrier animals who have one "good" gene and one mutated "bad" gene. Carriers are completely normal and healthy, but when two are bred together there is a 25% chance that the calf will inherit the "bad" gene from each parent and have a double copy. These calves get repeated pneumonia and ulcers inside the mouth, and usually die of infections by three to four months of age. A blood count (CBC) will show extremely high numbers of neutrophils, the white blood cell that creates pus. A genetic test can confirm the suspicion by testing for a double copy of the mutant gene. There is no cure for BLAD and it is invariably fatal.

From Nagahata H. J Vet Med Sci. 2004 Dec;66(12):1475-82. "Bovine leukocyte adhesion deficiency (BLAD): a review."

In Holstein cattle, the abnormal BLAD gene was traced back to one specific line: Osborndale Ivanhoe, Penstate Ivanhoe Star, and Carlin-M Ivanhoe Bell. Realizing that the future of the breed was at stake, the Holstein-Friesian breed organization tested all bulls and mandated that carrier bulls could not be used for AI. Over several generations, BLAD gradually reduced in the breed, and now is essentially eliminated.

American Lineback Cattle Registry

2017 Classification Scores

Congratulations breeders on a great year of classifying! This feature is made possible by collaborations with the Brown Swiss Association and Composite Dairy Cattle Registry. List is organized alphabetically by current Owner/Farm.

<i>2017 High Scoring 2 Year Olds</i>		
<i>* 2 year olds scored 85 points or more</i>		
Ayr-Back Halfback Rosie-P-Rc	Ayrback Farm	Oxford, PA
Double-Rose Improver Azalea-Rc	Ayrback Farm	Oxford, PA
Kuszmars Ls Ashantee	Kuszmars Farm	Batavia, NY
Plenty-Good Mystic Elynn-Red	Plenty-Good Dairy	Annville, PA
Three-Rivers Ion Adel	Pretty Stitches Linebacks	Elizabethtown, PA
Richmond-Fd Sally	Richmond Farms Dairy LLC	North Collings, NY
Lyn-She Apollo Mitzi	Schwenk, Kalli	Annville, PA
J & E-Zeiset Mary Rose	Zeiset, Jonas	Lewisburg, PA
<i>2017 Cows Scored Excellent</i>		
<i>*may previously have scored 90 or above</i>		
Plenty-Good Mystic Sherona-Rc	Plenty-Good Dairy	Annville, PA
Glen-Mar Appollo Bounty	Hayward, Martha	Castleton, VT
Glen-Mar Half Zippy	Hayward, Martha	Castleton, VT
Glen-Mar Mystic Jumping Beans	Hayward, Martha	Castleton, VT
Kuszmars Muds-A-Flyin-Rc	Kuszlyk, John & Marjorie	Batavia, NY
Richmond-FD Candy Apple-Red	Richmond Farms Dairy LLC	North Collins, NY
Lyn-She Pro Mystery	Schwenk, Kalli	Annville, PA

...Continued from page 3...

BLAD in Lineback Cattle: A Deadly Emerging Threat

The Lineback heifer survived the night but, based on her bloodwork, she was euthanized the next morning. Genetic testing confirmed that she had the double-positive BLAD gene. It is very likely that other Lineback calves who have died of pneumonia may have also been afflicted with BLAD. Since it is rare to do complete blood counts on sick calves, however, they likely have not been diagnosed. At this point, we do not know what percentage of Lineback cattle are carriers of the BLAD gene.

Because of these unknowns and large-scale impact on the breed, the Lineback registry should consider methods for addressing this potentially devastating problem, such as:

1. Publicizing that some Lineback cattle are BLAD carriers, and encouraging breeders to use only tested bull and test their own breeding stock. BLAD carriers should either be bred only to BLAD negative animals, or not used for breeding at all.
2. Making BLAD testing a requirement for registration, and have every animal's BLAD carrier status marked on its registration. Testing costs \$30-40/sample. This has been used in Quarter Horses for genetic diseases and has been quite effective.
3. Making BLAD testing a requirement for all AI sires and ban the use of BLAD carrier sires for breeding.

The one approach that is recommended least is doing nothing. BLAD is a controllable problem, but one that should be addressed early in the Lineback breed before it is spread through the gene pool and becomes hard to eliminate without much greater losses.

American Lineback Cattle Registry

Lebanon Area Fair Lineback Dairy Show -the 2018 Show welcomed 24 entries in the show

Spring Heifer Calf

- 1st (1st Y) Lyn-She Little Joe Margo: Amie Heagy Lebanon, Pa.,

Registrar/Composite Dairy Cattle Update

To American Lineback members, breeders and enthusiasts,

The last 4 years have not been favorable to dairy farmers, but without a doubt 2018 will go down in history as one of the toughest and most challenging years to be a dairy farmer. Family dairy farms have been hit the worst.

What many fail to realize is that the family farms plays an important role in the communities where they reside. Churches, schools, grocery stores, equipment dealers, parts stores, fuel, feed, clothing stores and other retail business all rely on local people and customers.

It makes no difference the breed of choice; all dairy breeds are in the same situation. Many have chosen to discontinue dairying, partly because of age (retirement), no one to continue the farming operation and others due to marketing situations.

YOU as breeders and owners of Lineback animals are the stewards of the breed. It is YOU that are responsible for taking the breed forward, thru careful breeding to offer the best genetics possible for not only the continuation of the

American Lineback Cattle Registry

...continued from page 6

breed, but to hopefully increase interest from owners of other breeds to consider utilizing Lineback genetics in their herds. While many breed registries have seen considerable decline in registrations. YOU as Lineback breeders can be proud that registrations of Lineback animals has held steady and registrations for 2018 will be slightly higher than the number registered in 2017. For 2018, it looks like registrations will be over 360 animals. Congratulations!

Membership is important for any organization, and memberships have held steady too.

While registrations are all that the Composite Registries do, we do registrations for both dairy and beef, 2019 will mark our 6th year. We do our best to offer other services that can be of importance to breeders and owners. Genomics are increasingly taking center stage not only for the knowledge of the animals in your herds but also when it comes to marketing.

As the Composite Registries, we continually keep pushing forward with genomic possibilities that are available to ALL dairy and beef producers regardless of breed. There are many options available to you. We have signed an agreement with Neogen/GeneSeek for providing genomic testing. A2 is one of the tests that is available for \$12. Breeders are looking for animals that possess the A2/A2 genetics. Another test that Linebacks can take advantage of is the Basic test, it provides information on about 15 traits including Milk, Fat, Protein, the cheese test Kappa Casein, Beta Casein and Beta Lactoglobulin. Also with the Basic test animals are tested for parentage verification and BLAD. This test is priced at \$29 per animal. The Basic test is based on the individual animals own DNA and parent information is not used in the results. Many breeders like this test because of it only being based on the animals own merits.

For those of you marketing semen on bulls, or selling any animal, we can also do a performance pedigree.

As the Composite Registries, we are here to serve YOU the breeders and owners. We would like to take this opportunity to thank each and everyone of you for the opportunity for allowing us to provide services to you.

We want to wish all of you a Merry Christmas, Happy New Year and hoping that the new year of 2019 brings more and better opportunities for YOU and Lineback breeders, owners and members.
